

$\alpha = \min_{\|x\|=r} V(x) > 0$
$0 < \beta < \alpha$: $\Omega_\beta = \{V \leq \beta\} \subset B_r$

$\dot{V} \leq 0$: quien entra a Ω_β
no sale (es invariante)

$V(x) < \beta$ en B_δ: $B_\delta \subset \Omega_\beta$
